

LeasePoints — MVP Brief (One Pager)

Goal

Enable businesses to pay commercial **lease** via **credit card/Amex** to earn points. We charge a **flat 3% platform fee per transaction** (tenant sees this clearly; it's treated as a deductible business expense). Funds are routed to **real estate agency/landlord trust accounts** via **Stripe Connect Custom** with clean reconciliation.

Primary Users & Roles

- **Tenant (Payer):** saves card, schedules payments (weekly/fortnightly/monthly), receives receipts.
- **Agency/Landlord (Payee):** onboarded to Stripe Connect, receives funds to trust account(s), gets reconciliation exports.

MVP Scope (what we're shipping first)

1. Tenant payment flow

- Create tenant profile → link lease → add card (Amex/major cards).
- Choose schedule: **weekly / fortnightly / monthly** (set day-of-week/day-of-month), start date, end/ongoing.
- One-off and scheduled payments (off-session) using saved payment method.
- Clear summary: base rent, our **3% platform fee**, total charged.

2. Agency onboarding (Stripe Connect Custom + Hosted Onboarding)

- Agency sign-up → KYC/KYB via Stripe onboarding.
- Capture **trust account** details; support **multiple properties / trust accounts** per agency.
- Payout schedule: default weekly (configurable per agency).

3. Receipts & notifications

- Email receipt to tenant on success.
- Failure notifications + smart retries (3, 24, 72 hrs); tenant can update card.
- Monthly statement email for tenant (optional v2).

4. Reconciliation & exports

- **Rich Stripe metadata + Level 2/3 enhanced data** (where available) on charges/transfers.
- Daily **CSV export** (and API endpoint) compatible with agency software (e.g., MRI) + **Xero**-friendly CSV.

5. Admin & reporting (read-only v1)

- Dashboard tiles: today's collected, scheduled next 7 days, failed queue, payout status.
- Search by tenant, lease ID, agency ref, property.

Stripe Architecture (opinionated, end-to-end)

- **Connect Custom** accounts for agencies/landlords. Use **Stripe Hosted Onboarding** to minimize compliance burden.
- **Destination Charges:**
 - `payment_intent` on **platform** with `transfer_data[destination]=acct_...` (agency).
 - Take **platform fee** via `application_fee_amount` (3% of total).
- **Saved payment methods:**
 - Use **SetupIntents** to store card for **off-session** billing (scheduled runs).
 - Mark PaymentIntent with `setup_future_usage='off_session'`.
- **Scheduling engine:**

- Cron/queue worker (Cloud Scheduler + Cloud Tasks / BullMQ).
 - Idempotency keys per run (`tenantId|leaseId|period|runAt`).
 - **Webhooks (must-handle)**
 - `payment_intent.succeeded/failed`, `charge.dispute.created`, `transfer.paid`, `payout.paid`, `payment_method.automatically_updated`.
 - **PCI scope**: SAQ-A (Stripe Elements/Checkout; no raw PAN on our servers).
-

Data Model (minimal)

- **Tenant** {`id`, `legal_name`, `email`, `abn(optional)`, `default_payment_method`, `timezone`}
 - **Agency** {`id`, `name`, `abn/acn`, `stripe_account_id`, `trust_accounts:[{id, bsb, acct_last4, label}]` }
 - **Property** {`id`, `agency_id`, `address_line`, `suburb`, `state`, `postcode`, `external_ref`}
 - **Lease** {`id`, `property_id`, `tenant_id`, `agency_ref`, `rent_amount_cents`, `rent_currency`, `frequency(enum)`, `due_rule(cron-ish)`, `next_due_at`, `late_fee_policy(optional)`}
 - **PaymentSchedule** {`id`, `lease_id`, `cadence(enum W/FN/M)`, `by_day/by_dom`, `start_date`, `end_date|null`, `status`}
 - **Payment** {`id`, `lease_id`, `scheduled_for`, `run_at`, `status`, `payment_intent_id`, `receipt_url`, `failure_reason`}
-

Reconciliation: required identifiers & Stripe fields

Put these in **charge.metadata** (copied into transfers) and mirror in **statement_descriptor_suffix** (max 22 chars, abbreviated). Suggested schema:

```
{
  "tenant_id": "TEN-12345",
  "tenant_name": "Acme Pty Ltd",
  "tenant_abn": "12 345 678 901",
  "lease_id": "LEA-7890",
  "agency_id": "AGY-456",
  "agency_ref": "MRI-UNIT-22B",      // their internal lease/property
ID
  "property_addr": "22B George St, Sydney NSW 2000",
  "trust_acct_id": "TRUST-01",
  "period_start": "2025-10-01",
  "period_end": "2025-10-31",
  "due_rule": "MONTHLY_DOM_1",
  "invoice_no": "LP-2025-10-000123",
  "base_rent_cents": 250000,
  "platform_fee_cents": 7500,      // 3%
  "total_charged_cents": 257500,
  "schedule_id": "SCH-1122",
  "run_sequence": "2025-10-01#1"
}
```

- Use **Level 2/3 data** where supported (merchant reference, tax amt=0 if N/A, line item: "Commercial Lease – [Address] – [Month/Year]").
- **Statement descriptor suffix** example: LP 22BGEORGE OCT25.
- Ensure the **Transfer** to **acct_...** includes **metadata** mirroring the above for trust-account reconciliation.

MRI / Agency Software Integration (MVP path → scalable path)

- **MVP:** Nightly **SFTP CSV** drop (and downloadable from admin), columns:
 - `date, time, tenant_name, tenant_id, lease_id, agency_ref, property_addr, period_start, period_end, amount_gross, platform_fee, amount_net, card_last4, payment_intent_id, transfer_id, payout_id`
 - **V2:** REST push (webhook or polling) to agency system (MRI API), with idempotent upserts by `invoice_no` or `payment_intent_id`.
 - **V3:** Realtime event webhooks to agencies (optional).
-

Scheduling & Timezones

- Store **tenant timezone** (default **Australia/Sydney**).
 - Monthly rule options: **DOM** (e.g., **1st/15th/last**) or **relative** (e.g., **last business day**).
 - Retry ladder for failures: **T+0 (instant)** → **T+1 day** → **T+3 days**; pause schedule after 3 failures and notify.
-

Emails & Receipts

- On success: **Stripe receipt URL** (or custom SendGrid/Mailgun template) showing:
 - Base rent, platform fee (3%), total charged, property, period, last4, auth code, invoice no., and a “For tax records” note.
 - On failure: actionable email + link to update card; auto-reschedule visible.
-

Compliance, Risk & Ops (MVP posture)

- **KYC/KYB:** rely on Stripe Connect onboarding (Custom + Hosted).
 - **Card disputes:** basic alerting + agency unaffected (we hold platform risk; document policy).
 - **Fee handling:** our 3% collected via `application_fee_amount`.
 - **GST/VAT:** engineer to surface configuration toggle if platform fee is taxable (invoice/receipt fields ready).
 - **Rate limits & idempotency:** required for scheduler and webhook handlers.
-

Tech Notes (developer chooses stack)

- **Frontend:** Minimal tenant portal + agency onboarding link; use Stripe Elements for card capture.
- **Backend:** RESTful services + job queue; secure secrets; robust webhook processor with signature verification.
- **Storage:** Postgres (UUID PKs), row-level audit.
- **Infra:** Any cloud; scheduled jobs + worker dynos; observability (logs/metrics/alerts).

Success Criteria (MVP)

- First agency onboarded; at least **10 live leases**.
- **100%** of payouts reconciled to trust accounts using exported CSV in MRI.
- Scheduled runs execute with **< ±5 min** drift; failure rate **< 2%** with working retries.
- Receipts delivered for **100%** successful payments.
